

SCIENTIFIC NETWORKS

Scientific Networks: the Julius Clinical Solution

Julius Clinical manages global clinical drug trials that will have a major impact on medicine and make a real difference to people's lives around the world.

Our unique combination of scientific leadership and operational excellence ensures that the trial data is of the highest quality. Our internationally recognised academic leaders are actively involved in the design, conduct, and interpretation of clinical trials. This scientific expertise and credibility combined with operational excellence means that we are uniquely equipped to assist in providing answers for today's clinical drug development challenges.

Scientific Investigator Networks are a vital element in both academic and clinical research settings. Among peers in the scientific community, investigators communicate and collaborate directly, contributing to the advance of the study imperatives. For this reason, within the clinical research setting, advantages are gained when coordinated research networks are maintained and managed. Julius Clinical will continue to build a global leadership position. As we value our relationships within national and international networks, our goal for the upcoming years is to further expand this network of academic centers and partners.

OUR SCIENTIFIC NETWORKS

Julius Clinical has created and manages several Scientific Networks which offer:

A strong and committed network of academic leaders and investigators around the world in many therapeutic areas.

Partnerships with key medical centers, academic leaders, and investigators to ensure commitment and adherence of local clinicians to study guidelines.

Access to sites and eligible patients for clinical trials.

The peer-to-peer leadership model: enhanced recruitment and retention through leadership of investigators in our networks.

■ ReSViNET

ReSViNET is a global network of experts in the field of Respiratory Syncytial Virus (RSV) infections who are known to be skilled recruiters. Together, they have designed and completed a multitude of RSV trials. ReSViNET consist of 17 board members representing a trial sites network of 100+ sites in almost 20 countries around the world. These sites are academic hospitals with many years of experience in clinical research enabling fast and high quality recruitment and above average retention rate.

■ Primary Care Research Network (PCRN)

PCRN focuses on performing high-quality research by utilising a group of motivated and qualified general practitioners, pharmacists, practice assistants and practice nurses with an interest in clinical scientific research. PCRN has more than 1400 GPs in The Netherlands and is active in Belgium, the UK and Spain.

■ BrainNET

BrainNET is a global network of clinicians and neuroscientists who are focused on neurodegeneration, neuroimmunology, neurovascular disorders and neuropsychiatric disease. The network focuses mainly on Alzheimer, Parkinson, ALS and Depression & Anxiety disorders. BrainNET provides access to over 300 hospitals, which together have more than 100 years' experience in various neurological areas and have access to a massive number of patients, enabling fast and high quality recruitment rate.

■ AfricaNET

Julius Clinical and Julius Global Health have joined together to create AfricaNET, a network of 40 local investigators from 20 countries with a trial network of over 100 sites. These investigators and sites have all many years of experience in research and performing clinical trials in the field of Infectious Diseases, Metabolic Diseases and Cardiovascular Diseases and have access to a substantial number of patients, enabling fast and high quality recruitment and retention rate.

■ CardioNET

CardioNET consists of more than 1000 hospitals in 30 different countries, providing sites and expertise around the world. The network has been involved in various large-scale randomised intervention trials relating to the prevention and treatment of cardiovascular disease and has extensive experienced staff in performing such trials facilitating fast and high quality recruitment and above average retention rate.

■ SurgeryNET

SurgeryNET is a global network of clinicians having extensive experience from many years of clinical studies in the field enabling fast and high quality recruitment and retention rate. Through the network more than 100 studies have been conducted with more than 12,000 patients worldwide.
